Preliminary Specification 0.2

FEATURES and FUNCTIONAL DIAGRAM

- Bipolar technology
- Reverse battery protection
- 3.5V to 30V Operation voltage
- -40 °C to 150 °C Superior temperature operation
- Open-collector 20 mA output
- Small Size SOT-23, SOT-89 or TO-92S
- Solid-state reliability
- Resistant to physical stress
- Activate with small, commercially available permanent magnets

APPLICATIONS

- Brushless DC motor commutation
- Automotive, Consumer and Industrial
- Solid-state switch
- Speed measurement
- Revolution counting
- Angular position detection
- Magnetic Encoder

DESCRIPTION

The CH411 family is a Hall-effect latch designed in bipolar technology. The Hall IC internally includes an on-chip Hall voltage generator, a voltage regulator for operation with supply voltages of 3.5 to 30V, reverse protection diode, temperature compensation circuitry, small-signal amplifier, Schmitt trigger and an output driver; all in a single package.

It is designed to respond to alternating North and South poles. While the magnetic flux density(B) is larger than operate point (Bop), the output will be turned on (Low), the output is held until the magnetic flux density(B) is lower than release point (Brp), then be turned off (High).

Thanks to its wide operating voltage range 3.5 to 30V and extended temperature range from -40℃ to +150°C, it is guite suitable for use in automotive, industrial and consumer applications.

The device is delivered in variety of packages to customers: SOT-23, SOT-89 for surface mount and TO-92S flat for through-hole mount. Both 3-lead packages are RoHS compliant.

1. Glossary of Terms

MilliTesla (mT), Gauss Units of magnetic flux density:

1mT = 10 Gauss

RoHS Restriction of Hazardous Substances

ESD Electro-Static Discharge

BLDC Brush-Less Direct-Current

Magnetic flux density applied on the branded side of the package which turns

Operating Point (B_{OP}) the output driver ON (VOUT = low)

Magnetic flux density applied on the branded side of the package which turns

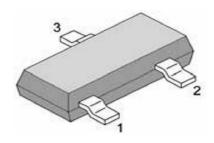

the output driver OFF (VOUT = high) Release Point (B_{RP})

2. Product Family Members

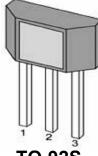

| Part Number | Marking ID | Description |
|-------------|------------|---|
| CH411SR | C411 | Bipolar latching, Hall-effect digital sensor IC, SOT-23-3L package, tape and reel packing (3000 units per reel) |
| CH411TB | C411 | Bipolar latching, Hall-effect digital sensor IC, flat, TO-92S package, bulk packing (1000 units per bag) |
| CH411ER | C411 | Bipolar latching, Hall-effect digital sensor IC, SOT-89-3L package, tape and reel packing (1000 units per reel) |

3. Pin Definitions and Descriptions

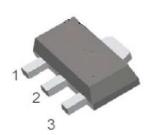

| SOT-23 (AT and ET) | TO-92S (A and A-T) | SOT-89 (BT) | Name | Type | Function |
|-----------------------|-----------------------|----------------|------|--------|---------------------------|
| 1 | 1 | 1 | VDD | Supply | Supply Voltage pin |
| 2 | 3 | 3 | OUT | Output | Open Collector Output pin |
| 3 | 2 | 2 | GND | Ground | Ground pin |

4. Absolute Maximum Ratings

| Parameter | Symbol | Min | Max | Units |
|-------------------------------|----------|------|-----|-------|
| Supply Voltage | VDD | - | 40 | V |
| Reverse Voltage | VRDD | - | -40 | V |
| Supply Current | IDD | - | 50 | mA |
| Output Voltage | VOUT | -0.3 | 40 | V |
| Output Current | IOUT | - | 50 | mA |
| Operating Ambient temperature | TA | -40 | 150 | °C |
| Storage Temperature | TS | -50 | 150 | °C |
| Junction temperature | TJ | | 165 | °C |
| Magnetic Flux | No Limit | | | Gauss |

Note: Exceeding the absolute maximum ratings may cause permanent damage. Exposure to absolute-maximum- rated conditions for extended periods may affect device reliability.ESD Protection

5. ESD protections

| Parameter | Value | Unit |
|-------------|--------|------|
| All pins 1) | +/-2 | kV |
| All pins 2) | +/-200 | V |

¹⁾ HBM (human body model, 100pF, 1.5 kohm) according to MIL 883C, Method 3015.7 or EIA/JESD22A114-A

6. Function Description

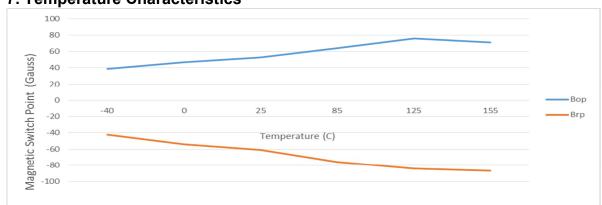

The CH411 exhibits latch magnetic switching characteristics. Therefore, it requires both south and north poles to operate properly.

The device behaves as a latch with symmetric operating and release switching points (BOP=|BRP|). This means magnetic fields with equivalent strength and opposite direction drive the output high and low.

Removing the magnetic field (B 0) keeps the output in its previous state. This latching property defines the device as a magnetic memory.

A magnetic hysteresis BHYST keeps BOP and BRP separated by a minimal value. This hysteresis prevents output oscillation near the switching point.

7. Temperature Characteristics

²⁾ acc. Machine Model: C=200pF; R=0ô

Preliminary Specification 0.2

10. Test Conditions

Note: DUT = Device Under Test

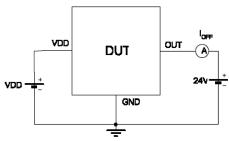

Supply Current

Note 1 - The supply current DD represents the static supply current. OUT is left open during measurement.

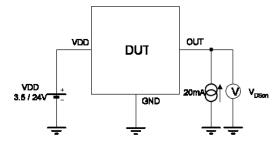

Note 2 - The device is put under magnetic field with B<B_{RP}-

Output Leakage Current

Note 1 - The device is put under magnetic field with B<B_{RP}

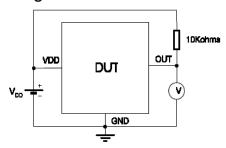

Output Saturation Voltage

Note 1 - The output saturation voltage V_{D8on} is measured at V_{DD} = 3.5V and V_{DD} = 24V

Note 2 - The device is put under magnetic field with B>B_{OP}.

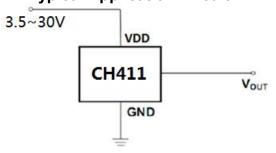

Magnetic Thresholds

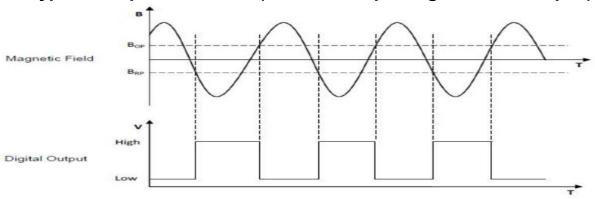

Note 1 - $B_{\rm OP}$ is determined by putting the device under magnetic field awapt from $E_{\rm SPath}$ up to $B_{\rm OPMex}$ until the output is switched on.

Note 2 - B_{np} is determined by putting the device under magnetic field swept from E_{OPmax} down to B_{RPmin} until the output is switched off.

11. Typical Application Circuit

12. Typical Output Waveform (The TO-92S package as an example)
